

Legume Nitrogen Fixation in a Changing Environment: Achievements and Challenges

Filesize: 9.52 MB

Reviews

Totally one of the best publication I have got ever go through. It really is packed with knowledge and wisdom I discovered this pdf from my dad and i recommended this book to discover.

LEGUME NITROGEN FIXATION IN A CHANGING ENVIRONMENT: ACHIEVEMENTS AND CHALLENGES

[DOWNLOAD](#)

Springer International Publishing AG. Hardback. Book Condition: new. BRAND NEW, Legume Nitrogen Fixation in a Changing Environment: Achievements and Challenges, Saad Sulieman, Lam-Son Phan Tran, The world population will grow more rapidly during the few coming years. This must be accompanied by a parallel increase in the agricultural production to secure adequate food. Sustainability considerations mandate that alternatives to chemical nitrogen fertilizers must be urgently sought. Biological nitrogen (N₂) fixation, a microbiological process which converts atmospheric N₂ into a plant-usable form, offers this alternative. Among these renewable sources, N₂-fixing legumes offer an economically attractive and ecologically sound means of reducing external inputs and improving internal resources. Environmental factors such as drought, elevated temperature, salinity, soil acidity and rising CO₂ are known to dramatically affect the symbiotic process and thus play a part in determining the actual amount of nitrogen fixed by a given legume in the field. Understanding how nodule N₂ fixation responds to the environment is crucial for improving legume production and maintaining sustainability in the context of global change. In this thoughtful and provocative new Brief, we provide critical information on how current and projected future changes in the environment will affect legume growth and their symbiotic N₂ fixing capabilities. Each section reviews the main drivers of environmental change on the legume performance that include drought, elevated temperature, salinity and rising CO₂, and soil acidity. Importantly we discuss the molecular approaches to the analysis of the stress response in legumes and the possible biotechnological strategies to overcome their detrimental effects.
