In Conic Sections the proportion involving e, given in this article, may not be given in this form. If a be the semi-major axis, and x the abscissa of the point c in reference to the centre, then the following equations are usually given, viz. the radius vector, de, --a ex; the distance from the focus to the foot of the normal, de, = e(a ex); the plus sign being used for the distance e d, and the minus sign for ed. These values readily give de-e(a ex)-de a ex hence, the proportion given in the text. 262. Let the curve he an hyperbola, the pin being in the upper focus. Proceeding as before, we find W but in this case e exceeds unity; hence W must exceed P, while in the former case W must be less than P. 063. Suppose, in the preceding case, that the pin over which the string passes is at the centre of the hyperbola. Let a be the semi-major axis, b the semi-minor axis, the axis of x horizontal, and y vertical. The axis of the hyperbola being vertical, the equation will be a?3?-bY=-aW. (1) Construct the triangle of forces cab, in which ah wiU be...
